## Management of Community Energy Strategies

---

### iCAST Mission

*“to provide economic, environmental, and social benefits to economically disadvantaged people and communities;  
and to provide education and training that builds local capacity.”*

---

iCAST will plan for and manage projects, integrating several components. This approach allows the client to work with one vendor, providing the most cost effective, sustainable, and efficient solution for your conservation strategy needs. The projects that iCAST will manage, include:

- Energy Efficiency Auditing
- Weatherization
- Community Education & Outreach
- Job Training
- Renewable Energy Assessment
- Business Plans
- Feasibility Studies
- Inspections
- K-12 Outreach
- Financial Management
- Monitoring and Evaluation
- Value-Added Agricultural Production
- Biomass and Waste Utilization
- Biodiesel
- Wind Power
- Solar Energy
- Water Remediation
- New Technology Development

iCAST (International Center for Appropriate & Sustainable Technology) has a extensive working relationship with various Rocky Mountain and Great Plains communities. iCAST understands the need for an efficient and engaging transition to sustainable practices and looks forward to the opportunity to work with counties, communities and citizens to help them develop renewable energy, energy efficiency and sustainability programs that will strengthen economies, foster communities and enable environmental stewardship.

iCAST’s process and tools leverage local resources for local benefit. iCAST builds teams that combine academia, government, industry experts and local champions to ensure project success and long term viability.

iCAST has years of successful experience with Rocky Mountain and Great Plains communities. Assisting entrepreneurs with the design, development and implementation of projects, iCAST has the ability and desire to help your community achieve its vision of a sustainable future.
